This was our second time competing for the Young Investigator Award, and I'm honored to have received first place. I'm deeply grateful to all the collaborators from the Yale PET Center and Yale New Haven Hospital. Special thanks to Professors Chi Liu, Richard Carson, and Edward Miller for their invaluable mentorship on this project 🙌

I am incredibly grateful and humbled to have been awarded the 2nd prize in the Cardiovascular Young Investigator Award for our research on 'Dynamic

Imaging and Tracer Kinetic Modeling of 18F-Flutemetamol PET for ATTR Cardiac Amyloidosis Patients'. It is truly an honor to be recognized for our work in this prestigious field.

Many thanks to my supervisor Dr. Chi Liu and Dr. Edward Miller, as well as my collaborators from Yale PET Center and Yale New Haven Hospital!

Hi everyone, I am humbled by the opportunity to deliver an oral presentation at the 'SS11 Young Investigator Award Cardiovascular session' on June 25 at 12:30 pm [#SNMMI2023](#).

Our work represents the first investigation into the kinetics of 18F-flutemetamol in the heart and the generation of parametric images specifically for patients with ATTR cardiac amyloidosis. By employing parametric modeling to fully quantify the volume of distribution, we aim to provide clinicians with a more precise, accurate, and reliable method for assessing the presence and progression of amyloid plaques in the myocardium. Ultimately, this approach has the potential to significantly enhance patient care.

I value any comments or questions you may have and I would be delighted to address them during the session. See you tomorrow!
